

# Lip Blushing Requirements

**LUXORIOUS LASHES & LIPS IS NOW SEEKING LIP BLUSH & LIP INFUSION MODELS. THIS IS FOR PORTFOLIO AND MODEL PURPOSES, FOR SUCH REASONS ALL SERVICES OFFERED ARE FOR A DISCOUNTED MODEL PRICE. Please read through to ensure that you will be able to go thru with the procedure. As with ALL our services, there are no refunds, however if you are unable to make a scheduled appointment, you MAY receive credit if notice is 24 hours before the scheduled appointment time, no exceptions.**

- Must have no previous PMU on the lip area.
- Must not have any scars on the lip.
- Must not be seeking to make large corrections to lip shape/size.
- No color corrections or advanced techniques offered at this time.
- Not accepting models with Fitzpatrick 5 & 6 skin tones at this time.

## **YOU ARE NOT A SUITABLE CANDIDATE IF ANY OF THE FOLLOWING APPLY:**

- Bruising/bleeding disorders. It is extremely difficult to achieve smooth, even color saturation on clients who bruise or bleed excessively.
- Natural lip color is an extremely dark or bluish tone. This is considered corrective work and is very difficult to achieve a desired result using this very sheer, very soft technique.
- Clients who have had lip filler, chemical peels or laser treatments in the last 30 days. If you are planning to have lip fillers, please wait until after your lip blush procedure(s) is complete.
- Active cold sore/fever blister/acne on or around the mouth. If you develop any of the above, please contact us immediately to reschedule your appointment.
- Clients who are pregnant or nursing are unable to undergo ANY cosmetic tattooing procedures.

## **HOW TO PREPARE FOR YOUR APPOINTMENT:**

- If you have ever had a cold sore, even once, it is HIGHLY recommended that you take prescription anti-viral medication (Whatever your healthcare provider recommends) for MINIMUM 5 days before and 5 days after your lip blush procedure. If you are unsure if you've ever had a cold sore, it is recommended that you err on the side of caution and take the anti-viral. As with ANY medication, please consult with your healthcare provider before beginning or stopping any medications.
- Please refrain from using any blood thinning substances for 5 days prior to your procedure. This includes but is not limited to alcohol, fish oil, and advil.
- Keep your lips moisturized! Chapped lips are the enemy so do what you have to in order to keep them as soft as you possibly can for the day of your appointment.
- Plan to stay OUT of the sun completely for 5-7 days and then take extreme caution by using high spf chapstick for a minimum of one month after that.

## Long Term Care

- To keep your lips looking their best, it is recommended that you schedule touch-ups every 1-2 years. This isn't required by any means, but failure to do so will result in your lips eventually returning to their original color.
- This may be the most important thing to remember going forward:

YOU MUST ALWAYS DISCLOSE TO MRI TECHNICIANS AND ANYBODY PERFORMING ANY LASER SERVICE TO YOUR FACE THAT YOU HAVE HAD A COSMETIC TATTOO CONTAINING IRON OXIDE.

Some lasers can make your cosmetic tattoo turn black. Even if it looks like your cosmetic tattoo is completely faded, there might be some left behind and it will turn black.

## Medical Contraindications

- Medical conditions can affect the outcome of your lips. Please notify me if you have any of these or other medical conditions before making your appointment. If you come to your appointment with a sunburn, a facial treatment, a breakout, rash or any other contraindications, I will not be able to do your procedure and you will lose any deposits you have made.
- You are a smoker (pigment may not retain properly, colors may distort)
- Anemia (pigment may not retain properly).
- Skin irritations/conditions (sunburn, rash, eczema, shingles, acne, blisters ) or psoriasis near the procedure area
- Sick with cold, flu, or sinus/respiratory infection (please reschedule and stay home to recover)
- Had Botox within 4 weeks of scheduled appointment
- Used Accutane in the past year
- Taken steroids such as cortisone, Retin-A or Renova (cannot use less than 4 weeks before procedure).
- Acute acne in the procedure area
- High blood pressure or heart conditions
- Taking Adderall
- Taking blood thinners such as aspirin or similar medication
- Diabetes
- Had an organ transplant
- Auto-immune disease.
- You have Diabetes type 1 or 2 (due to slow healing and infection, color may or may not retain well).
- Taking Chantix (must be off for 3 months prior to having procedure. Doctors note may be required).
- Thyroid/graves disease (medication may cause pigment to not retain properly)
- Epilepsy
- Undergoing chemo
- Prone to keloid scarring or hypertrophic scarring

- Pacemaker or major heart problems
- Had an organ transplant
- Viral infections and or diseases
- Glaucoma
- Herpes simplex
- Transmittable blood disease
- Have a blood disorder (i.e. sickle cell anemia, haemophilia or a platelet disorder)
- HIV or Hepatitis
- Are susceptible to post-inflammatory hyper-pigmentation
- Have spider veins or birthmark/mole in procedure area
- Undergoing chemotherapy or radiation
- Have sensitivities to dyes/pigments or local anesthetics
- Fitzpatrick scale 5 or 6 (dark brown and black skin tones, prone to hyper/hypopigmentation and keloids)

### **REASONS FOR PREMATURE FADING**

- Overusing lip exfoliator
- Having lip fillers after having your lips tattooed
- Biting your lips and peeling the skin
- Fast metabolism
- Iron deficiency
- Hypo/er thyroidism
- Hormone replacement meds
- Other daily meds
- Smoking
- Sunbeds & sunbathing
- Not using sun protection
- Anti aging products on the lips... the chemicals in these can also react with your lips and change the colour. It is best to go around your lips, not on top of them
